Bookman International B.V. : Fantastic Paper Airplanes before purchasing it in order to gage whether or not it would be worth my time, and all praised Fantastic Paper Airplanes:

1 of 1 people found the following review helpful. Five Stars By Jean Myers He loved it 0 of 2 people found the following review helpful. A terrible book with terrible instructions By Susan Bridges I had to write a review after seeing the description. The pterodactyl was the first one my 8-year-old son tried to make from this book. Even with my husband helping him (and then I joined in), there was no way we could figure out how to actually fold it. The instructions are vague and not enough steps are illustrated. Really not a good book.

Fantasy fliers, reproductions of real planes, experimental models, and competition craft: these marvelous paper airplanes, shown in full color, will set the imagination soaring. Every aviation enthusiast will find more than a few favorites among these 34 aircraft, which range from a modified version of the Wright brothers biplane to an out-of-this-world flying saucer. The Speedy design is a cross between the French Mirage jet and a bat, and true to its name, is a fast and cunning model. The pterodactyl takes inspiration from the prehistoric flying reptile and is simple to make. Or try a facsimile of the F-16 Fighter, Tupolev, Catapult Defense Craft, Matchstick Rocket, Starship, or Sailplane.

General instructions on tools and techniques, plus detailed folding plans for each one, will help you construct them all.
