I have given this book away to so many parents of new babies. This should be re-published! As it is I found yet another used copy to give to some new parents recently and enjoyed looking at the book all over again. If you don't want to keep paying \$20 a pop for toys with batteries, lights, music, bells and whistles (not that there isn't a place for these too) -- if simple toys that your babies will play with for hours appeals to you - get yourself a copy before the price goes up again. It is a SIMPLE book, not a lot of pages, but full of great ideas for constructing usable, safe toys from common household objects. I have recommended it for 20 years.1 of 1 people found the following review helpful. Mom of 2 disappointedBy A CustomerThis book is great in theory. I suppose I was looking for new ideas. I didn't find many here. The book is VERY short--don't be surprised! If you find yourself with NO ideas of what to give your baby or toddler to play with--maybe this is your book! It wasn't mine for long!1 of 1 people found the following review helpful. Great for Older SiblingsBy G. McPhersonI have bought many copies of this book over the years. It's nice to have them around to give to older siblings when a new baby is born, so that they can make toys for the newborn for months to come. These are

very simple ideas, just elaborations of "toys" such as plain oatmeal boxes and such. It's also full of facts about the developmental stages of children and what they like to see and do in the first couple of years, so the toys that are made for them are ones they will use. Babies do *\*not\** need expensive toys; a look through this book is a good reminder of that.
