Rodrigo Hernandez Cabos : Panzerkampfwagen IV (Compendium Modeling Manual) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Panzerkampfwagen IV (Compendium Modeling Manual):

Great for modellers wishing to improve their skills By Mark Pieters I love to build models and one of my very favorite subjects is the Panzer Type IV. This book takes several models in 1/35 scale and shows you how to superdetail and airbrush each one of them. The pointers are general and not the "exact step by step type" but anyone with basic skills will find much to learn from, and will probably be suitably inspired. There is a great walkaround section with color closeup photos of museum pieces that are fanatical for the detailer. I got this book primarily for that reason. Some of the painting techniques were new to me and I will attempt them on my next kit. A great book for the beginner/novice modeller who is aware of aftermarket goodies like photo

etch frets, and who has recently aquired an airbrush and is ready to experiment with it.

The backbone of the Panzer divisions, the Panzer IV entered service at the start of the war; over 8,500 were built and variants covered in this book include the Wirbelwind (Whirlwind) - a Flakpanzer with a Flakvierling in place of the turret of the gun tank-and the Jagdpanzer tank destroyer.
