Create A Derby Car With No HiccupsBy Anna SeegerThis is one of the very few how to books that I've ever read that actually had all, and I do mean all, of the information needed to build a project from start to finish. Nothing is left out. The "secrets" are actually well proven steps that will ensure your derby car turns out to be one you can be proud of no matter what the level of competition.Want to build a car that will place among the medals? Pinewood Derby Secrets contains all the information you will ever need. It is written by a mechanical engineer who is also a former boy scout. The author has helped his twins build honest cars that all placed

in the medals. The instructions are so simple and the online videos suggested are so straight forward that anyone can build a great Pinewood Derby car. George Tompkins Brown Jr., you have over delivered on this "must have" book. 1 of 1 people found the following review helpful. Derby cars no longer a mystery By ryry11 I find it funny how much children get excited over every and anything. Well my younger cousin all of a sudden got interested in derby racing. I didn't mind helping him start because I could tell how inexpensive and "non-dangerous" it was so I was all for helping, EXCEPT, I knew nothing about derby cars. That's what lead me to the book. Easy to read and follow. Simple steps and instructions made creating our derby car a breeze. And though I hate to admit it, because I'm a girly-girl, it was actually kinda fun. 0 of 0 people found the following review helpful. Great Book for the beginner car builder. By Tom W. Pinewood Derby Secrets eBook and bonus section Raingutter Regatta Tips. In a very simple "cut to the chase format, this book provides step-by-step instructions with pictures and web links, the web links will connect you to web videos designed to help you understand wheel and axle preparations, car testing, and lubrication. Additionally there are vendor web links to direct you to the right supplies. You are urged to build your car within the Boy Scout fundamental principle of Honesty through adhering to your Pack Rules. An engineer through repeated lab testing developed these proven methods. I am a Mechanical Engineer and a former Scout. Over the years I have helped my twin scouts to become three-time pinewood derby champs. I am fortunate to have had input from several other Pinewood Derby winning dads whom I've pooled secrets from. I have built a timed test track which was crucial to filter out the real vs. perceived advantages. I then track tested these secrets to determine which of these are the best methods to use. I do not recommend using everything that is supplied in the standard BSA kit, but with this book you will be able to build a car that will be faster on the track. Your wheels will be aligned better, your axles will be superior, your weight placement will be optimal, and lubrication and wheel treatment will be unbeatable. With a few simple tests you can make sure that your car is fast before the race. Other book authors are also vendors of derby car parts and try to push these car parts within their books, but I am not affiliated with any vendors and do not sell any derby car parts, so you will find a non-biased approach in this book. The cars that I have helped to build have all brought home medals and or trophies without exception. Some of these are featured on this book's cover. Go to your next Pinewood Derby armed with the proper information. Even if you chose not to apply all of the methods provided in this book you would still do much better in the race with the selections you decide to use. The derby is a fun way to learn about physics and see it in action. Have fun at the races! Sincerely, George Tompkins Brown Jr.
